**Job Title:** Field Technician (Emergency Water Tanker Driver)

**Job Type:** Night Standby based at home, able to respond to callouts and be at an operational depot ready for work within 1 hour of a phone call during your shift.

**Location:** Earls Colne, CO6

**Employment Type:** Permanent Full Time

**Salary:** £27,235 base standby fees, with opportunities of additional earning dependant on level of callout activity and overtime.

**Requirements:** C+E Licence, Digital Drivers Card and current Drivers CPC accreditation.

#### Role Overview:

As an overview, Water Direct provide safe, wholesome drinking water wherever, whenever a piped supply is unavailable, unusable or inadequate. Primarily our work is in supporting the Water Utilities when they have a mains supply issue, keeping the general public on supply by using our tankers and other alternative means.

We also work for the Commercial and Private sectors supplying the construction, festival, petrochemical and other industries with water in bulk. As part of this, we also provide Contingency Water Supplies to keep businesses running throughout Utility outages; all 24/7/365.

The job would begin with a period of 3 – 5 weeks of working Mon-Fri 08:00 – 16:30 learning the job, procedures and equipment to enable you to work unsupervised.

Following an initial training period, and evidencing you are capable of undertaking your duties without direct supervision, you would advance to a 4on/4off shift pattern, covering Night Standby shifts. Night Standby shifts would be from 18:00 – 06:00.

Whilst on standby, you would be at home, available to contact by phone, sober and able to mobilise to our local operational depot within an hour of a callout request ready to work.

Due to the nature of the product we are supplying, and the fact it is intended for human consumption; our Quality Systems are very stringent and applicants would be required to undertake a level of internal training and show understanding of the importance of what we do. Field Technicians are responsible for safely abstracting water from the mains networks, ensuring minimal risk of contamination, and transporting and delivering it in the same manner.
